To whom it may concern:

Over the years with the majority of the gunite pool and spa industry moving towards the pebble and pigmented/colored pool finishes, industry wide we have experienced the problems with finishes dusting and or scale build up on the finishes. We have all tried numerous costly chemical treatments, plaster additives, and aggressive fire ups with only limited success with some until the pool is turned over to the home owner. Then the costly service calls start.

Over the past 12 months of our in the field use and testing, STARTUPTEC we have found to be essential to the initial fill of a new swimming pool finish. We have had great success with virtually stopping the dusting and scaling problems experienced nation wide.

When using the STARTUPTEC we have also experienced less PH and ALK spikes during the initial 30 days of a new finish. Which is a plus for my contractors and there customers.

Mike McGahey
Sales/Technical Support

A handwritten signature in blue ink, appearing to read "Mike McGahey", is written over a horizontal line.

A large, stylized graphic of a water splash in shades of blue and white, located at the bottom of the page. The splash is circular and radiating, with many droplets and ripples.
