PROTEC

SCALE • STAIN REMOVER

Fountains

Bird baths

Tabletops

Water Gardens

Strong Surface Protection

- Prevents and removes existing white calcium and mineral scale buildup
- Removes and prevents metal stains
- Keeps fountain finish clean, protected and surfaces looking new
- Helps protect against pump damage

8 fl. oz. (237 ml) Made in USA

PROTEC® was especially developed to help remove and prevent white calcium deposits and common metal stains on statuary surfaces. Protec's® synergy formulation provides long lasting protection with superior results. To keep fountain or water feature free of algae, use Fountec® weekly.

BEFORE YOU START: Best use of Protec® is achieved when fountain is clean of debris and freshly filled with clean water. Water fountains with normal loss of water due to evaporation require only the "Preventative" treatment after initial filling. Fountains with some loss of water due to splashing (leakage) require the "Optional Monthly Dose."

Fountain Size In U.S. Gals.	Initial Dosage		Optional Monthly Dose and splasher fountains
	Preventative	Removal	
1	1/4 tsp.	1/2 tsp.	1/4 tsp.
10	1/2 oz.	1 oz.	1/2 oz.
100	4 oz.	8 oz.	4 oz.
200	8 oz.	16 oz.	8 oz.

USAGE NOTES: All water fountains evaporate large amounts of water in a very short time period. For best results and to keep surfaces clean and free of mineral buildup, follow guidelines below:

1. Always keep fountain water at proper level.
2. Indoor fountains - fill with fresh water and then use distilled water to reduce excessive buildup of minerals, *especially in hard water areas.*
3. Outdoor fountains - every 1 to 3 months drain and refill fountain with fresh water and then add Protec® "Initial Dosage."
4. To remove existing calcium buildup, add the "Removal Dosage" to freshly filled fountain. If necessary, repeat this process until surfaces are clean. It may take several applications over a period of weeks to clean and descale surfaces.
